

The use of mini-grants as a quality improvement, technical assistance, and community coalition-building tool

New Orleans, LA • May 2014

Jennifer Woodward, M.D., M.P.H. Catherine Shoults, M.P.H. Gianfranco Pezzino, M.D., M.P.H.

Kansas Health Institute

- Describe Immunize Kansas Kids coalition mini-grants; case study
- Understand how innovative approaches to grant-making represent an opportunity for technical assistance
- Contrast traditional grant application, award, completion process with TA approach
- Describe lessons learned, limitations of grant-making TA assistance

The History

2004: Kansas ranked 43rd in the nation for the standard vaccination series according to NIS

Immunize Kansas Kids coalition formed to identify barriers and implement plan for improvement

- Root cause analysis (e.g. KS specific reports)
- Support implementation of evidence-based practices (e.g. immunization registry, community coalitions, QI)

Immunize Kansas Kids

Goal: Protect every Kansas child from vaccine-preventable diseases

Mini-grant Rationale

- Many evidence-based immunization interventions require local participation and implementation
- Improvements often require input and effort from multiple angles and multiple community stakeholders
- Many communities lack capacity and resources to develop and maintain a successful immunization coalition
- Several evidence-based interventions to increase immunization rates require basic knowledge of quality improvement processes

Mini-grant Goals

Two types of grants:

- Community coalition-building
- Quality improvement projects

Decrease barriers to building immunization coalition

Increase capacity to understand local immunization landscape and implement evidence-based strategies to improve rates

Project Details

Mini-grants range from \$5,000-10,000

Funded by Kansas Health Foundation

Project completed in 12 months

Grantee must provide vaccines or be tied to the vaccination system

Immunizations + Quality Improvement

QI Project Goals

Goals:

- Improve immunization practices
- Disseminate Plan-Do-Study-Act cycle and quality improvement culture

Public and private immunization clinics targeted

Community Improvement Grant Goals

Goals:

- Improve immunization rates using evidence-based practices
- Support development of a community immunization coalition tasked with creating an implementation plan for evidence-based practices

Small or struggling LHDs targeted

Expected Technical Assistance

How to perform QI and PDSA

How to determine root cause

How to find evidence-based materials

How to build a coalition

How to make an implementation plan

KHI Also Provided this TA

- How to write a grant proposal
- How to match your objectives to the grant's objectives
- How to create deliverables
- How to report on time
- How to spend grant funds
- How to report grant results

Traditional Grant-making Process

IKK Mini-grant Process

IKK Mini-grant Process

Case Study: LHD #1

Very small staff; inexperienced in grant-making process

Little experience in developing project timeline, meeting deliverables, implementation plans, writing/submitting invoices, spending funds according to grant guidelines, writing final report, etc...

Hadn't used QI before

Case Study: LHD #1

Case Study: LHD #1

Success!

Applicant completed both QI and coalition grants

Learned (a lot) about the grant process in addition to original goals of the grants

LHD better connected with IKK coalition members and resources

Benefits of this Type of TA

Increased capacity of grantees in many areas in addition to QI and coalition-building

Many grantees increased immunization rates via QI projects

Strengthened relationship between KHI and LHDs

Drawbacks of this Approach

Resource intensive

Additional TA diverted away from original goals of the project

Other outside grants will not follow this paradigm (setting unrealistic expectations?)

Why PHIs are well-suited for this work

Already know TA, QI, grant process and coalition building techniques

Connected to community

Neutral party

Why PHIs Potentially Not Well Suited

Cost of staff time

- Need to be available anytime
- Bursts of intense activity

Conflict of interest (competing for grants)

Requires financial investment

How to Replicate in Your Community

Start small

Dedicate a person who has previous grant experience (and QI) to provide the TA

Create a contract/agreement that can be easily amended

Build QI into internal process

Be willing to change your approach

How KHI is Expanding this Model

"Accreditation Readiness" Project – TA for LHDs in completing the pre-requisites: CHA, CHIP, SP

Similar grant application and acceptance process

Grant reviewers often vote to "revise and resubmit"

KHI project lead works with health department staff to improve application, better define project, and resubmit

Information for policy makers. Health for Kansans.

Outsourcing for Outcomes

Re-Granting for Local Health Departments - Opportunities for Public Health Institutes

May 21, 2014

Rachel Miller Vice President for HIV Programs and Special Initiatives Public Health Solutions New York, NY

Guess who?

Leaves millions of dollars in federal disaster aid left unspent

Executes contracts long after the contract year has begun (and, infrequently, after it's ended)

□ Often reimburses vendors more than **90** days late

Agenda

Challenges

Nonprofit Partners: A Solution

- Appeal
- Structure
- Cost

Comparison of Contracting (PHI) model and Government Achievements

Challenges

Government Challenges

The Challenges: Procurement

Government procurement requirements designed to prevent waste and fraud (and to protect chief executive) – not to maximize efficiency

Multiple levels of review prolong contracting process

□ Request for Proposals process frequently takes two years

Contract execution for awardees can result in "retroactivity" – execution dates after term has begun

□ 54% of NYC contracts executed retroactively in 2013 - a 35% increase from 2012. Retroactivity ranged from 8 to 90 days.¹

¹Agency Procurement Indicators, FY2013. Mayors Office of Contract Services, City of New York, , p. 31

The Challenges: Prompt Payment

- Payment requires multiple levels of approvals, sometimes spanning multiple data systems
- Can be insensitive to vendors' special needs
- Must wait for full contract execution
- □ S....L....O....W
 - 26% of nonprofit contractors' payments more than 90 days late (greatest incidence of tardiness is from state governments)¹
 - Contractors manage aging accounts receivable by borrowing, delaying vendor payments, missing payroll

¹Urban Institute and National Council of Nonprofits, 2013

The Challenges: Unspent Funds

- Contract modifications subject to same review delays as new contracts
- ❑ Virtually impossible to shift funds from underspending or poor-performing contractors to others because of time-consuming procurement rules → resources are not maximized to support services
- May result in penalties from federal funders
 Fodder for hungry press

Enter: Public Health Institutes!

PHI Appeal

| Flexibility and Agility | Speed | Lower Cost | Audit- Compliant Policies & Procedures |
|--------------------------------------------------------------|--------------------------------------------|----------------------|-------------------------------------------------|
| Relationships with Government & Community Providers | "Neutral" party – political distance | Content Expertise | Ability to advocate with lawmakers |
| Can encumber funds through PHI by fiscal year end | | | |

Structural Option #1: PHI as Grantee

Federal or State Government

PHI as Grantee (bona fide agent of government partner)

Subcontracts to Vendors, including Local Government

Structural Option #2: PHI as Master Contractor

MERGING RESEARCH AND ACTION

- Negotiated fee
- □ Typically lower fringe benefits rates
- Large, diverse staff can often absorb new projects
 similar skills, established infrastructure, economies of scale
- Not constrained by civil service titles and rules
- Can propose and adapt to innovative reimbursement methodologies (PHIs and subcontractors)

Outsourcing need not sacrifice government accountability (contracting ≠ privatization)

- Local government retains authority to make programmatic and spending decisions
- Frequent reports (weekly, monthly, quarterly)
- Daily communication
- Gov't staff maintains ongoing contact with vendors

Retaining the best of government procurement policy while adding efficiency: *Fairness, transparency, accountability, speed & flexibility*

Comprehensive, competitive solicitation of master contractor

VENDOR

Out-and-Out Outstanding Outsourced Outcomes

- NYC Ryan White grant 100% committed; 100% spent (total value = \$120 million)
 - Number of contracts reduced and/or enhanced in a contract year: approx. 100/year (out of 200)
- Average time for subcontractor payment, Public Health Emergency Program = 2 weeks
- Ability to turn 3 GB of client-level data into \$8 million of rules-heavy payments each month
- □ Innovative and responsive reports

| Contracts were cost-b | based in 2010. | | |

began on March 1, 2011 and were deliverables-based for FY 2011. In 2012 they were performance-based. The service actuals in 2011 may be inaccurately low due to data

entry problems during the phase of deliverables-based payment and the client-level database transition

Solutions

NYC.

Challenges

- Managing disagreements
- Private sector status, private sector reimbursement expectations: what happens when funding is cut?
- Relationships count! Government decision-makers change.
- Evolving government imperatives: sharing limited administrative resources when government shifts its priorities
