

A Public Health Approach to Reducing Incarceration and Improving Health Outcomes

Karen Reitan, AM, Public Health Institute of Metropolitan Chicago Fikirte Wagaw, MPH, Public Health Consulting, LLC

> 2106 NNPHI Annual Conference New Orleans, LA May 2016

Agenda

- PHIMC overview
- Intersection of HIV and Incarceration
- Community Reentry Project Overview
- Strategic Planning and System Level Work
- Next Steps

PHIMC Overview

PHIMC Mission and Vision

The Public Health Institute of Metropolitan Chicago (PHIMC) enhances the capacity of public health and health care systems to promote health equity and expand access to care.

How We Work

PHIMC leads efforts to strengthen the public health infrastructure in Illinois through:

- Organizational development
- System transformation
- Fiscal management
- Program implementation

Intersection of HIV and Incarceration

HIV and Incarceration

- Jails and prisons have disproportionate burden of infectious diseases, including HIV
- Approximately 25% of People living with HIV and AIDS (PLWHA) pass through a correctional facility each year
- Rate of diagnosed HIV infection among inmates in prisons is
 >5 times the rate among those not incarcerated
- Percentage of deaths due to AIDS is >1.5 times higher in the U.S. prison population than in general population
- A study of over 30,000 recently released Illinois prisoners found that they had a 3.5 times greater risk of death after release than other residents of the state
 - In first 2 weeks post release this was 12.7 times higher

HIV and Incarceration

- Good prison/jail health = Good community health
- Many not tested or diagnosed until incarcerated
- Reentry populations face many challenges to successful re-integration, which are exacerbated by HIV
- Essential to build and maintain primary and secondary prevention resources in the community, and to connect correctional facilities to these resources

IL response to HIV and Incarceration

- Illinois improved medical care for HIV+ inmates, implemented opt-out testing at intake and voluntary testing at release
- Many now get better care while incarcerated released with undetectable viral load
- Upon release many are lost to care, often due to feeling good, increased stigma and competing priorities
- Link between Cook County Jail (CCJ) and Community Medical Care
 - Telemedicine at Illinois Department of Corrections (IDOC) and continuity clinic

Community Reentry Project (CRP) History and Overview

CRP History

1999-2003: CDC/HRS A funded demo project at CDPH

2004: Hiatus, CRP received no funding despite success 2009: PHIMC becomes lead agent 2010-11: CRP lead creation of Strategic Plan

2011-15: Strategic Plan refinement, implementation, and monitoring

2015-16: update Strategic Plan

2005 to Present: funded by Illinois Department of Public Health

What makes CRP unique?

- Serves a highly vulnerable population with many health disparities and unmet basic needs
- Brings a public health framework to corrections/reentry health
- Addresses whole person and social determinants that impact health and criminogenic factors

CRP History and Services

- Six Funded subcontractors provide:
 - Intensive case management
 - Substance abuse treatment and counseling
 - Employment training
 - HIV testing and health education
 - Assistance obtaining government identification
 - training
 - Combined legal counseling and social work for mothers and pregnant women
 - Discharge planning packets
- All subcontractors leverage additional resources within and external to organization

Additional CRP Activities

- Other activities:
 - monthly meetings of funded partners
 - quarterly statewide video conferences
 - technical assistance
 - strategic planning

Select 2015 Direct Services Accomplishments

- 158 received intensive case management
- 41 received substance abuse treatment services
- 24 completed employment training
- Approx. 4000 received health education services
- 740 assisted in obtaining ID
- 3 trainings on discharge planning & medical adherence for corrections and community-based providers
- 34% recidivism rate (IDOC rate = 51%)
- 97% engaged and retained in HIV primary care

Strategic Planning and Policy/Systems-Level Changes

Strategic Planning Overview

- 2010-11 Strategic Planning Process:
 - Led to HIV, Corrections and Reentry Section in 2012-2015 Illinois HIV AIDS Strategy
 - Created with input from multiple stakeholders in various formats
 - Identified and prioritized HIV and related policy and systems-level administrative issues that affect reentry adults
 - Priorities used to focus meetings, discussions and strategies

Policy and Systems Changes

The following were identified and prioritized in the Strategic Plan:

- Opt-out HIV testing in Illinois Department of Corrections and Cook County Jail
- Release with 30 days of HIV medications
- Allow pre-release enrollment for Medicaid re-instatement
- Begin AIDS Drug Assistance Program (ADAP) enrollment pre-release
- Access to Ryan White services while on work release
- Understand and monitor Medicaid expansion/ACA enrollment for PLWH and reentry populations

Additional System Level Changes

- Alternative sentencing prog. health education for transgender individuals within 1st arrest for sex work
- Built on longstanding alternative sentencing prog. for women with 1 arrest for sex work to create a longer program for women with multiple arrests
- Staff obtaining anger management certification to address unmet need in community
 - Often a mandate on release but not accessible to clients (recidivism prevention)

Next Steps

Next Steps

- Continue development of 2016-2020 Plan
- Continue quarterly statewide meetings
- Renew efforts to understand HIV prevention and care in jails statewide support efforts to increase and/or enhance jail's work in these areas
 - Survey of Illinois Sheriff's Association
- Develop and implement a Reentry and HIV Cultural Competency training
